Personal Statement

From an early age, I was always fascinated by technology, this landed me into trouble a couple of times since I would end up tearing things apart to find out how various devices worked. One day I took apart my grandfather's radio, to try and figure out where the voices from the radio were coming from. Well, needless to say, the radio was never quite the same. With my immense passion for technology, I knew I would eventually end up dealing with computers. Several years later look at me now, a budding software engineer eager to get started on something that will take me on the path to achieving my goals.
